

Federal Procurement Data System – Next Generation (FPDS-NG)

Overview

The Federal Procurement Data System – Next Generation (FPDS-NG) enables the Federal government to understand where the public's tax dollars are spent. Collecting data about Government procurements provides a broad picture of the overall Federal acquisition process. The ability to look at all contract actions across many agencies in greater detail is key to establishing trust in the Federal government and credibility in the professionals who use these contracts. With a view of Federal spending, analyses can be conducted to structure strategic procurements, save money, improve government-wide management, and establish interoperability with other government-wide data systems.

FPDS-NG is an e-Gov initiative managed by the General Services Administration (GSA) within the Integrated Acquisition Environment (IAE) that provides Congress with data on all federal contracts. It is a Web-based system that offers both the public and Federal government with a self-service, near real-time, searchable repository for information about unclassified government contracts with third party vendors.

Registrants to the system have access to more than 12 million contract actions from across the Federal government at no cost. Users can view standard reports as well as create custom reports using FPDS-NG's Custom Reports module.

Program Mission

FPDS-NG provides visibility into all Federal contract sourcing arrangements with commercial suppliers. It is a Web-based system that offers both the public and Federal government with a self-service, near real-time, searchable repository for information about unclassified government contracts with third party vendors. FPDS-NG collects contract reporting data from all Federal agencies.

Benefits

What's in FPDS-NG?

- **Contract Action Data:** FPDS-NG collects over 180 data elements on each contract action, including base actions and modifications. Reports pertaining to contract awards and socioeconomic information about awards to small and disadvantaged businesses are available.
- **Real-time Availability:** Contract data is available to the public in near real-time, after the contract action is reported.
- **Legacy Data:** Over 12 million legacy contract actions are now available in FPDS-NG. This includes FPDC transactions back to 1979.
- **Contract Actions Under \$25,000 (SF281 Summary Data):** FPDS-NG offers the public greater visibility and transparency into how the government is spending taxpayer money. FPDS-NG now collects individual contract action reports on purchases at \$2,500 dollars and greater.
- **Release of Data:** For security reasons, the Department of Defense (DoD) only releases contract data after a 90-day waiting period. However, the contract information is included immediately in the aggregate spending totals found in Standard Reports.

Fast Facts:

FPDS-NG

FPDS-NG is a program within the Business Transformation Agency's Defense Business Systems Acquisition Executive (DBSAE) directorate. The DBSAE directorate is responsible for driving the successful implementation of DoD systems and initiatives in support of the Department's Business Transformation goals. Its mission is to develop, coordinate, and integrate projects, programs, systems and initiatives providing DoD Enterprise-wide business capabilities to the warfighter.
